Dear Health Professional,

The patient delivering this information, is a member of our charity and may have been diagnosed with Myalgic Encephalomyelitis, Fibromyalgia, or both (It is the responsibility of each individual patient to confirm the source of his/her diagnosis.)

As accurate and reliable information on these two conditions can be difficult to obtain, we would be delighted if you would contact the charity for our free healthcare provider's information pack. This offer is also advertised on the GP Intranet by the DHSSPS.

We offer this free service, as patient outcomes depend heavily on self-management advice offered by professionals. No doubt you will agree, patient safety is of the utmost concern when dealing with these chronic, complex conditions.

In April 2013, Hope 4 ME & Fibro NI approached the Patient and Client Council for Northern Ireland and, as a result the ME and Fibromyalgia Patient Group was formed and is now working under the direction of the P&CC.

The major outcome so far, of this collaboration, has been the introduction of a new care pathway for Fibromyalgia patients. The new care pathway is almost at completion stage and will be soon be widely distributed to GPs and other relevant NHS professionals.

Please also be advised, our trustees are available to provide a 30 minute slide information presentation to all groups of healthcare providers or interested parties. There is no charge for this service but mileage costs would be appreciated.

Contact details to order information pack or any further enquiries as above.

Kind regards

The Trustees of Hope 4 ME & Fibro Northern Ireland
